WHAT IS CLAIMED IS:

An image pickup control apparatus for controlling an image pickup apparatus via a data communications interface unit, comprising:

storage means for storing control data for controlling the image pickup apparatus;

connection detecting means for detecting a connection to the image pickup apparatus via the data communications interface unit; and

transmission control means for transmitting the control data stored in said storage means to the image pickup apparatus when said connection detecting means detects a connection to the image pickup apparatus.

2. An image pickup control apparatus according to claim 1, wherein said storage means stores the control data for controlling a stop, a hue, a color density and a shutter speed.

3. An image pickup control apparatus according to claim 1, further comprising reception detecting means for detecting a control reception state of the image pickup apparatus, wherein said transmission control means transmits the control data stored in said storage means to the image pickup apparatus when said connection detecting means detects a connection to the image pickup apparatus and when said reception

10

5

15

20

detecting means detects a control reception state of the image pickup apparatus.

- 4. An image pickup control apparatus according to claim 1, wherein the image pickup apparatus has storage means for storing the control data transmitted from said transmission control means as current control data.
- 10 5. An image pickup control apparatus according to claim 1, wherein said storage means stores the control data for each of a plurality of photographing conditions, the image pickup control apparatus further comprises guide means for guiding to select a desired photographing condition by displaying a plurality of photographing conditions stored in said storage means, wherein said transmission control means transmits the control data corresponding to the desired photographing condition selected by being guided by said guide means.

6. An image pickup control apparatus according to claim 5, wherein the photographing condition is based upon an environment and photographing state of a subject, the environment and photographing state including evening photographing, wedding reception photographing, closeup photographing, ski ground photographing, night scene photographing and other

20

25

photographing.

5

20

- 7. An image pickup control apparatus according to claim 5, further comprising display control means for displaying a model image corresponding to the control data for the desired photographing condition selected by being guided by said guide means.
- 8. An image pickup control apparatus according to claim 7, further comprising change means for changing the control data corresponding to the model image by referring to the model image displayed by said display control means, wherein said transmission control means transmits the control data changed by said change means to the image pickup apparatus.
  - 9. An image pickup control apparatus according to claim 8, wherein said display control means displays the model image corresponding to the control data changed by said change means.
  - 10. An image pickup control apparatus according to claim 8, further comprising rewrite means for changing the control data stored in said storage means to the control data changed by said change means.
    - 11. An image pickup control apparatus according

10

25

to claim 5, further comprising return instruction means for transmitting the control data corresponding to the desired photographing condition selected by being guided by said guide means and instructing the image pickup apparatus to return a photographed image corresponding to the control data.

- 12. An image pickup control apparatus according to claim 11, further comprising display control means for displaying the photographed image returned from the image pickup apparatus in response to an instruction by said return instruction means.
- 13. An image pickup control apparatus according
  to claim 12, further comprising change means for
  changing the control data corresponding to the
  photographed image by referring to the photographed
  image displayed by said display control means, wherein
  said transmission control means transmits the control
  data changed by said change means to the image pickup
  apparatus.
  - 14. An image pickup control apparatus according to claim 8, wherein said return instruction means transmits the control data changed by said change means and transmitted by said transmission control means to the image pickup apparatus and instructs the image

pickup apparatus to return the photographed image corresponding to the changed control data.

15 An image pickup control apparatus for a system in which an image pickup apparatus and a printer are connected via data communications interface units, the image pickup control apparatus comprising:

detecting means for detecting a print performance of the printer when a detection between the image pickup apparatus and the printer is detected; and

transmission control means for transmitting a photographed image from the image pickup apparatus to the printer, the photographed image having a definition corresponding to the printer performance detected by said detecting means.

- 16. An image pickup control apparatus according to claim 1, wherein the data communications interface unit is a general digital interface unit.
- 17. An image pickup control apparatus according to claim 15, wherein the data communications interface unit is a general digital interface unit.
- 25 18. An image pickup control apparatus according to claim 1, wherein the data communications interface unit conforms with an IEEE 1394 interface bus.

20

5

10

10

15

20

25

19. An image pickup control apparatus according to claim 15 wherein the data communications interface unit conforms with an IEEE 1394 interface bus.

20. An image pickup control method for controlling an image pickup apparatus via a data communications interface unit, comprising:

a storage step of storing control data for controlling the image pickup apparatus;

a connection detecting step of detecting a connection to the image pickup apparatus via the data communications interface unit; and

a transmission control step of transmitting the control data stored at said storage step to the image pickup apparatus when said connection detecting step detects a connection to the image pickup apparatus.

- 21. An image pickup control method according to claim 20, wherein said storage step stores the control data for controlling a stop, a hue, a color density and a shutter speed.
- 22. An image pickup method apparatus according to claim 20, further comprising a reception detecting step of detecting a control reception state of the image pickup apparatus, wherein said transmission control step transmits the control data stored at said storage

10

15

20

25

step to the image pickup apparatus when said connection detecting step detects a connection to the image pickup apparatus and when said reception detecting step detects a control reception state of the image pickup apparatus.

- 23. An image pickup control method according to claim 20, wherein the image pickup apparatus has a storage step of storing the control data transmitted at said transmission control step as current control data.
- 24. An image pickup control method according to claim 20, wherein said storage step stores the control data for each of a plurality of photographing conditions, the image pickup control apparatus further comprises a guide step of guiding to select a desired photographing condition by displaying a plurality of photographing conditions stored at said storage step, and said transmission control step transmits the control data corresponding to the desired photographing condition selected by being guided at said guide step.
- 25. An image pickup control method according to claim 24, wherein the photographing condition is based upon an environment and photographing state of a subject, the environment and photographing state including evening photographing, wedding reception

photographing, closeup photographing, ski ground photographing, night scene photographing and other photographing.

26. An image pickup control method according to claim 24, further comprising a display control step of displaying a model image corresponding to the control data for the desired photographing condition selected by being guided by said guide step.

10

15

25

- 27. An image pickup control method according to claim 26, further comprising a change step of changing the control data corresponding to the model image by referring to the model image displayed at said display control step, wherein said transmission control step transmits the control data changed at said change step to the image pickup apparatus.
- 28. An image pickup control method according to claim 27, wherein said display control step displays the model image corresponding to the control data changed at said change step.
  - 29. An image pickup control method according to claim 27, further comprising a rewrite step of changing the control data stored at said storage step to the control data changed at said change step.

10

25

30. An image pickup control method according to claim 24, further comprising a return instruction step of transmitting the control data corresponding to the desired photographing condition selected by being guided at said guide step and instructing the image pickup apparatus to return a photographed image corresponding to the control data.

- 31. An image pickup control method according to claim 30, further comprising a display control step of displaying the photographed image returned from the image pickup apparatus in response to an instruction by said return instruction step.
- 15 32. An image pickup control method according to claim 31, further comprising a change step of changing the control data corresponding to the photographed image by referring to the photographed image displayed at said display control step, wherein said transmission control step transmits the control data changed at said change step to the image pickup apparatus.
  - 33. An image pickup control method according to claim 27, wherein said return instruction step transmits the control data changed at said change step and transmitted at said transmission control step to the image pickup apparatus and instructs the image

pickup apparatus to return the photographed image corresponding to the changed control data.

34. An image pickup control method for a system in which an image pickup apparatus and a printer are connected via data communications interface units, the image pickup control method comprising:

a detecting step of detecting a print performance of the printer when a detection between the image pickup apparatus and the printer is detected; and

a transmission control step of transmitting a photographed image from the image pickup apparatus to the printer, the photographed image having a definition corresponding to the printer performance detected at said detecting step.

- 35. An image pickup control method according to claim 20, wherein the data communications interface unit is a general digital interface unit.
- 36. An image pickup control method according to claim 34, wherein the data communications interface unit is a general digital interface unit.
- 25 37. An image pickup control method according to claim 20, wherein the data communications interface unit conforms with an IEEE 1394 interface bus.

20

5

10

10

15

20

25

38. An image pickup control method according to claim 34, wherein the data communications interface unit conforms with an IEEE 1394 interface bus.

39 An image pickup control system for controlling an image pickup apparatus via a data communications interface unit, comprising:

storage means for storing control data for controlling the image pickup apparatus;

connection detecting means for detecting a connection to the image pickup apparatus via the data communications interface unit; and

transmission control means for transmitting the control data stored in said storage means to the image pickup apparatus when said connection detecting means detects a connection to the image pickup apparatus.

- 40. An image pickup control system according to claim 39, wherein said storage means stores the control data for controlling a stop, a hue, a color density and a shutter speed.
- 41. An image pickup control system according to claim 39, further comprising reception detecting means for detecting a control reception state of the image pickup apparatus, wherein said transmission control means transmits the control data stored in said storage

10

15

20

means to the image pickup apparatus when said connection detecting means detects a connection to the image pickup apparatus and when said reception detecting means detects a control reception state of the image pickup apparatus.

- 42. An image pickup control system according to claim 39, wherein the image pickup apparatus has storage means for storing the control data transmitted from said transmission control means as current control data.
- 43. An image pickup control system according to claim 39, wherein said storage means stores the control data for each of a plurality of photographing conditions, the image pickup control apparatus further comprises guide means for guiding to select a desired photographing condition by displaying a plurality of photographing conditions stored in said storage means, and said transmission control means transmits the control data corresponding to the desired photographing condition selected by being guided by said guide means.
- 44. An image pickup control system according to

  25 claim 43, wherein the photographing condition is based

  upon an environment and photographing state of a

  subject, the environment and photographing state

including evening photographing, wedding reception photographing, closeup photographing, ski ground photographing, night scene photographing and other photographing.

5

10

- 45. An image pickup control system according to claim 43, further comprising display control means for displaying a model image corresponding to the control data for the desired photographing condition selected by being guided by said guide means.
- 46. An image pickup control system according to claim 45, further comprising change means for changing the control data corresponding to the model image by referring to the model image displayed by said display control means, wherein said transmission control means transmits the control data changed by said change means to the image pickup apparatus.
- 20 47. An image pickup control system according to claim 46, wherein said display control means displays the model image corresponding to the control data changed by said change means.
- 25 48. An image pickup control system according to claim 46, further comprising rewrite means for changing the control data stored in said storage means to the

control data changed by said change means.

49. An image pickup control system according to claim 43, further comprising return instruction means for transmitting the control data corresponding to the desired photographing condition selected by being guided by said guide means and instructing the image pickup apparatus to return a photographed image corresponding to the control data.

10

5

- 50. An image pickup control system according to claim 49, further comprising display control means for displaying the photographed image returned from the image pickup apparatus in response to an instruction by said return instruction means.
- 15
- 51. An image pickup control system according to claim 50, further comprising change means for changing the control data corresponding to the photographed image by referring to the photographed image displayed by said display control means, wherein said transmission control means transmits the control data changed by said change means to the image pickup apparatus.

25

20

52. An image pickup control system according to claim 46, wherein said return instruction means

10

15

transmits the control data changed by said change means and transmitted by said transmission control means to the image pickup apparatus and instructs the image pickup apparatus to return the photographed image corresponding to the changed control data.

53. An image pickup control system in which an image pickup apparatus and a printer are connected via data communications interface units, the image pickup control system comprising:

detecting means for detecting a print performance of the printer when a detection between the image pickup apparatus and the printer is detected; and

transmission control means for transmitting a photographed image from the image pickup apparatus to the printer, the photographed image having a definition corresponding to the printer performance detected by said detecting means.

- 20 54. An image pickup control system according to claim 39, wherein the data communications interface unit is a general digital interface unit.
- 55. An image pickup control system according to claim 53, wherein the data communications interface unit is a general digital interface unit.

10

15

20

- 56. An image pickup control system according to claim 39, wherein the data communications interface unit conforms with an IEEE 1394 interface bus.
- 57. An image pickup control system according to claim 53, wherein the data communications interface unit conforms with an IEEE 1394 interface bus.
  - 58. A storage medium storing a control program for controlling an image pickup apparatus via a data communications interface unit, the program comprising:
  - a storage routine of storing control data for controlling the image pickup apparatus;
  - a connection detecting routine of detecting a connection to the image pickup apparatus via the data communications interface unit; and
  - a transmission control routine of transmitting the control data stored at said storage routine to the image pickup apparatus when said connection detecting routine detects a connection to the image pickup apparatus.
  - 59. A storage medium according to claim 58, wherein said storage routine stores the control data for controlling a stop, a hue, a color density and a shutter speed.

10

- 60. A storage medium according to claim 58, further comprising a reception detecting routine of detecting a control reception state of the image pickup apparatus, wherein said transmission control routine transmits the control data stored at said storage routine to the image pickup apparatus when said connection detecting routine detects a connection to the image pickup apparatus and when said reception detecting routine detects a control reception state of the image pickup apparatus.
- 61. A storage medium according to claim 58, wherein the image pickup apparatus has a storage routine of storing the control data transmitted at said transmission control routine as current control data.
- wherein said storage routine stores the control data for each of a plurality of photographing conditions,

  the image pickup control apparatus further comprises a guide routine of guiding to select a desired photographing condition by displaying a plurality of photographing conditions stored at said storage routine, and said transmission control routine

  transmits the control data corresponding to the desired photographing condition selected by being guided at said guide routine.

- 63. A storage medium according to claim 62, wherein the photographing condition is based upon an environment and photographing state of a subject, the environment and photographing state including evening photographing, wedding reception photographing, closeup photographing, ski ground photographing, night scene photographing and other photographing.
- 64. A storage medium according to claim 62,

  further comprising a display control routine of

  displaying a model image corresponding to the control

  data for the desired photographing condition selected

  by being guided by said guide routine.
- 15 65. A storage medium according to claim 64, further comprising a change routine of changing the control data corresponding to the model image by referring to the model image displayed at said display control routine, wherein said transmission control routine transmits the control data changed at said change routine to the image pickup apparatus.
  - 66. A storage medium according to claim 65, wherein said display control routine displays the model image corresponding to the control data changed at said change routine.

67. A storage medium according to claim 65, further comprising a rewrite routine of changing the control data stored at said storage routine to the control data changed at said change routine.

5

10

- 68. A storage medium according to claim 62, further comprising a return instruction routine of transmitting the control data corresponding to the desired photographing condition selected by being guided at said guide routine and instructing the image pickup apparatus to return a photographed image corresponding to the control data.
- 69. A storage medium according to claim 68,

  15 further comprising display control routine of

  displaying the photographed image returned from the

  image pickup apparatus in response to an instruction by

  said return instruction routine.
- 20

25

70. A storage medium according to claim 69, further comprising change routine of changing the control data corresponding to the photographed image by referring to the photographed image displayed at said display control routine, wherein said transmission control routine transmits the control data changed at said change routine to the image pickup apparatus.

10

15

20

25

71. A storage medium according to claim 65, wherein said return instruction routine transmits the control data changed at said change routine and transmitted at said transmission control routine to the image pickup apparatus and instructs the image pickup apparatus to return the photographed image corresponding to the changed control data.

72. A storage medium storing a control program for controlling an image pickup apparatus in which the image pickup apparatus and a printer are connected via data communications interface units, the control program comprising:

a detecting routine of detecting a print performance of the printer when a detection between the image pickup apparatus and the printer is detected; and

a transmission control routine of transmitting a photographed image from the image pickup apparatus to the printer, the photographed image having a definition corresponding to the printer performance detected at said detecting routine.

- 73. A storage medium according to claim 58, wherein the data communications interface unit is a general digital interface unit.
  - 74. A storage medium according to claim 72,

wherein the data communications interface unit is a general digital interface unit.

75. A storage medium according to claim 58,

wherein the data communications interface unit conforms

with an IEEE 1394 interface bus.

76. A storage medium according to claim 72, wherein the data communications interface unit conforms with an IEEE 1394 interface bus.

77. An image pickup control apparatus for controlling an image pickup apparatus via a data communications interface unit, comprising:

storage means for storing a plurality set of control data corresponding to a plurality of photographing modes, the control data controlling the image pickup apparatus;

connection detecting means for detecting a connection of the image pickup apparatus via the data communication interface unit; and

transmission control means for transmitting the control data stored in said storage means to the image pickup apparatus when a connection to the image pickup apparatus is detected by said connection detecting means and if it is judged that the image pickup apparatus is in a controllable state.

15

20

25

10

15

20

- 78. An image pickup control apparatus according to claim 77, wherein said storage means stores the control data corresponding to the photographing mode for controlling a stop, a hue, a color density and a shutter speed.
- 79. An image pickup control apparatus according to claim 77, further comprising control means for controlling to allow the control data to control the image pickup apparatus when the image pickup apparatus is in a manual setting mode, wherein said transmission control means transmits the control data stored in said storage means to the image pickup apparatus when said connection detecting means detects a connection to the image pickup apparatus and when the image pickup apparatus is controllable.
- 80. An image pickup control apparatus according to claim 77, wherein the photographing mode is based upon an environment and photographing state of a subject, the environment and photographing state including evening photographing, wedding reception photographing, closeup photographing, ski ground photographing, night scene photographing and other photographing.
  - 81. An image pickup control apparatus according

to claim 79, wherein said control means further comprises display control means for displaying a model image corresponding to the control data for a selected photographing mode, when the control data is set in accordance with the photographing mode.

- 82 An image pickup control apparatus according to claim 81, further comprising change means for changing the control data corresponding to the model image by referring to the model image displayed by said display control means, wherein said transmission control means transmits the control data changed by said change means to the image pickup apparatus.
- 83. An image pickup control apparatus according to claim 82, wherein said display control means displays the model image corresponding to the control data changed by said change means.

5
